

Consent and Information Form
Regarding Health History, Endodontic(Root Canal) Therapy, Pre-medication, Local Anesthetic and Medication.

It is the belief of this office that you should be informed about the treatment (therapy) and that you should give your consent before starting that treatment. The purpose of this form is to tell of the risks that may occur in the endodontic (root canal) treatment and the other treatment choices.

Root canal treatment is done in order to retain a tooth (or teeth) which otherwise might need to be removed. Related dental surgery is done when needed.

Risks of treatment are of two kinds: Those risks involved in general dental procedures and those risks specific to endodontic treatment.

**PLEASE DO NOT BE ALARMED BY THE FOLLOWING INFORMATION. MOST COMPLICATIONS ARE QUITE RARE©*

RISKS OF DENTAL PROCEDURE IN GENERAL:

Included (but not limited to) are complications resulting from the use of dental instruments, drugs, sedation, medicines, analgesics, anesthetics and injections. These complications include pain, infection, swelling, bleeding, sensitivity, numbness and tingling sensation in the lip, tongue, chin, gums, cheek and teeth, thrombophlebitis (inflammation to a vein), reaction to injections, change in occlusion (biting), muscle cramps and spasms, temporomandibular (jaw) joint difficulty, loosening of teeth or restoration of teeth, injury to other tissues, referred pain to the ear, neck and head, nausea, vomiting, allergic reactions, itching, bruises, delayed healing, sinus complications, and further surgery. Medication and drugs may cause drowsiness and lack of awareness and coordination (which can be influenced by the use of alcohol and other drugs), thus it is advisable not to operate any vehicle or hazardous device, or work for twenty-four hours or until recovered from their effects. Antibiotics may affect birth control pills.

RISKS MORE SPECIFIC TO ENDODONTIC THERAPY:

These risks include instruments broken within the root canals, perforations(extra openings) of the crown or root of the tooth, damage to bridges, existing fillings, crowns or porcelain veneers, loss of tooth structure in gaining access to canals and cracked teeth. During treatment complications may be discovered which make treatment impossible, or which may require dental surgery. These complications may include: blocked canals due to fillings, prior treatment, natural calcification, broken instruments; curved roots; periodontal disease(gum disease/pyorrhea); splits or fractures of the teeth. Surgical complications may occur which include numbness of the lip and/or chronic sinus problems.

THE OTHER TREATMENT CHOICES INCLUDE:

No treatment, waiting for more definite development of symptoms, or having the tooth removed. Risks involved in these choices might include pain, swelling, infection, loss of tooth and infection to other areas. Treatment will be done in a manner to minimize or avoid risks as success cannot be guaranteed.

Please understand that upon completion of root canal therapy in this office you will be directed to return to your general dentist for permanent restoration such as a crown, cap, jacket, only or filling. I, the undersigned, being the patient(parent or guardian of minor patient) consent to performing of the procedures decided upon to be necessary or advisable in the opinion of the doctor on the tooth or tissue as listed.

IF YOU HAVE ANY QUESTIONS, PLEASE WRITE THEM DOWN HERE.

Root canal treatment is an attempt to retain a tooth which may otherwise require extraction. Although root canal therapy has a high degree of success, it cannot be guaranteed. Occasionally, a tooth which has had root canal therapy may require re-treatment, surgery or even extraction.
